SAMPLE ORGANIZATION GUIDELINES / SYNTHETIC DATA

Willow & Vale Juicery

Brand & Pre-Publication Governance Manual

A worked example showing the information an organization can provide so Inkloom AI can review advertisements with clear evidence, explicit rules and human oversight.

DOCUMENT	VERSION	EFFECTIVE DATE
WV-BG-001	1.0	15 Oct 2026
MARKET	**OWNER**	**REVIEW CYCLE**
India - synthetic demo	Brand Governance Team	Every 6 months

THE BRAND PROMISE

Good ingredients. Clear choices.
We communicate plainly, use evidence-backed product information and never imply medical benefits.

IMPORTANT - FICTIONAL SAMPLE

Willow & Vale Juicery, all product names, prices, formulas, nutrition figures, policies and promotions in this manual are invented solely for demonstration. They are not real commercial specifications, certifications or legal advice. An organization must replace them with its approved information before production use.

Reference logo shown in this PDF is illustrative only. Upload the actual logo as a separate SVG or transparent PNG file for reliable logo-matching checks.

01 / FOUNDATION

Purpose, scope & brand identity

This manual defines the rules that Willow & Vale Juicery wants Inkloom AI to use when checking promotional and brand-owned content before publication.

1.1 Where these rules apply

- Digital advertisements, social media posts, paid promotions, ecommerce creative, posters, product cards, email banners and retail point-of-sale material.
- Rules apply to creators, employees, agencies and AI-assisted content unless an explicit exception is recorded.
- A rule may apply only to selected products, markets, channels, placements or date ranges. Preserve those conditions during extraction.

1.2 Official identity

Field	Approved value	Governance instruction
Company name	Willow & Vale Beverages	Use this company name in formal references. Do not invent legal suffixes.
Consumer brand	Willow & Vale Juicery	Use the exact brand name. Short form "Willow & Vale" is allowed after clear identification.
Approved tagline	Good ingredients. Clear choices.	Exact wording approved. Do not convert it into a health or performance claim.
Category	Fruit and vegetable juice blends	Do not describe products as medicines, supplements or clinical treatments.
Primary market	India; prices shown in INR	Use Indian rupee values where price is shown. This does not create legal/regulatory approval.
Packaging baseline	250 mL single-serve glass bottles	SKU facts override this baseline if an explicitly approved future product record differs.

1.3 Brand personality

Clear, fresh, grounded, welcoming and dependable. The brand should feel food-led and refreshing, not clinical, miraculous, fear-driven or aggressively competitive.

1.4 Source-of-truth hierarchy

- Approved, current product facts and approved claims are authoritative for their stated scope.
- Approved guideline rules govern style, identity and enforcement. If two approved sources conflict, do not silently choose one; escalate the conflict.
- Pending, rejected, expired or unverified records must not be treated as current approval.

NO ASSUMPTIONS

If a price, product value, certification, claim or policy is not available in the supplied approved knowledge, return: **"Unable to verify against the supplied guidelines; needs user review."**

02 / VISUAL SYSTEM

Colour palette & logo usage

Use these named values for deliberate design elements. Photographs may contain other colours; a colour outside the palette is not automatically a violation unless a rule restricts that use.

2.1 Approved colour palette

Name	HEX	Primary use	Restriction
Forest Green	#204B3C	Primary brand field, headings, buttons, logo	Approved as main dark brand colour.
Citrus Orange	#E8783C	Accent, highlights, small graphic marks	Avoid small white text on orange; verify contrast.
Warm Cream	#FAF5EB	Light background, packaging fields	Preferred light background for primary logo.
Charcoal	#25312D	Body text and high-legibility copy	Preferred text colour on cream.
Soft Sage	#DCE8DD	Secondary background, panels, natural tone	Use charcoal or forest text for readability.

FOREST #204B3C	Primary
CITRUS #E8783C	Accent
CREAM #FAF5EB	Light
CHARCOAL #25312D	Text
SAGE #DCE8DD	Soft field

2.2 Logo requirements

- Promotional advertisements must include a recognisable approved Willow & Vale logo, except where a documented channel-specific exception has been approved.
- Primary forest-green logo: use on cream, white or another approved light background. Reverse cream logo: use on forest green or other approved dark backgrounds. Monochrome logo: use only where a monochrome output is required.
- Keep clear space on every side at least 25% of the logo-symbol height. For a 1080 px-wide digital creative, target a logo width of at least 120 px unless a channel-specific exception is approved.
- Never stretch, skew, rotate, recolour, crop, obscure, rebuild, add effects to or place the logo on a visually busy background that removes legibility.
- Do not infer an exact logo match from a low-resolution or partly hidden mark. Return an uncertain result for human review.

REFERENCE FILE REQUIRED FOR MATCHING

This sample PDF describes logo variants but does not provide production logo source files. For image matching, the organization must separately upload the official logo and each approved variant.

03 / DESIGN SYSTEM

Typography, layout & accessibility

These are Willow & Vale internal creative standards for the demo, not statements of universal statutory requirements.

Element	Approved direction	Check / failure handling
Headlines	Montserrat SemiBold or approved fallback; concise, sentence case	Do not use decorative scripts for critical claims or product facts.
Body copy	Source Sans 3 Regular or approved fallback; plain language	Prefer one readable sans-serif family for long copy.
Font count	No more than two font families per creative, unless an approved campaign system says otherwise	Flag visually inconsistent or difficult-to-read typography.
Hierarchy	One clear headline, one supporting message, one action if needed	Avoid many competing headlines or dense copy blocks.
Digital canvas	For 1080 x 1350 creative, body copy target >= 28 px and mandatory disclosure target >= 24 px	These are internal targets; assess actual image resolution and placement.
Contrast	Target at least 4.5:1 for ordinary text and 3:1 for large text	If image sampling or text-region segmentation is unreliable, mark as uncertain.
Safe margins	Keep critical copy and logo away from crop edges and platform overlays	Use channel-specific safe areas where supplied.

3.1 Layout and imagery

- A viewer should identify the brand, product and primary message without searching across the canvas.
- Use deliberate alignment and sufficient empty space. Do not allow a product image, sticker or decorative element to cover required information.
- Use real, approved product representations. Do not alter packaging, ingredients, fill level, product size or product colour in a way that misleads.
- Objects such as blenders, fruit, leaves, people or kitchen tools are not violations by themselves. Evaluate them only against an applicable approved rule.
- Do not use hospital scenes, white coats, medical symbols or before/after body imagery to imply a treatment, diagnosis, doctor endorsement or health outcome.

3.2 Accessibility and legibility

- Text must remain legible at the intended viewing size. Important information must not rely on colour alone.
- Ensure text/background contrast meets the internal target where measurable. Gradients, photos, shadows and transparency may require region-based sampling or human review.
- Supply alternative text when the publication channel supports it. The poster itself should not rely on tiny text to communicate an essential warning.

UNCERTAINTY RULE

A failed OCR read, hidden text region, ambiguous font measurement or low-resolution image is not evidence of compliance. Mark the specific check as **Unable to verify against the supplied guidelines; needs user review.**

04 / WRITING SYSTEM

Tone of voice & messaging

Write like a knowledgeable, friendly food guide: clear, lively and grounded in the facts the organization has approved.

Principle	Required behaviour	Avoid
Clear	Use plain everyday language. Explain unfamiliar processing terms when needed.	Dense pseudo-scientific phrases, unexplained acronyms.
Warm	Be welcoming and positive, without exaggeration.	Aggressive urgency, hostile or shaming language.
Specific	Use approved ingredients, percentages, size and prices when relevant.	Unverified numbers, implied benefits or invented product details.
Honest	Describe what the beverage is and how it is processed.	Miracle, cure-all, medical or detox framing.
Respectful	Speak about food choices without shame or fear.	Body-shaming, guilt, claims that ordinary food choices are dangerous.
Concise	Aim for 12-20 words per sentence; rarely exceed 25 words.	Long, crowded sentences and multiple competing messages.

4.1 Approved style examples

Use this	Do not use this	Why
"A bright mango and ginger blend for your afternoon pause."	"A miracle elixir that transforms your body."	Avoid unsupported medicinal or miraculous effect.
"No added sugar; contains naturally occurring sugars."	"100% sugar-free."	The products contain naturally occurring sugars.
"Made with 60% mango, 30% orange and 10% ginger."	"Packed with mega-dose live enzymes."	Use precise, approved composition; avoid unsupported nutrition or science claims.
"Enjoy chilled."	"Your organs are full of toxins. Cleanse them now."	No fear-based, detox or physiological cleansing claim.
"Good ingredients. Clear choices."	"India's healthiest juice."	The latter is an unsupported superiority claim.

4.2 Context matters

Restricted words must be interpreted in context. A sentence such as "We do not claim that our juice detoxifies the body" may be educational and compliant. A sentence claiming "Detoxifies your body" is not. Do not block a creative solely because OCR finds a keyword; inspect the meaning and the surrounding sentence.

APPROVED BRAND LINE

Good ingredients. Clear choices. This tagline is approved exactly as written. A variant that adds a health outcome, guarantee or unsupported comparison is a new claim and requires review.

05 / CLAIMS & TERMINOLOGY

Claims policy: permitted, prohibited & conditional

Claims are checked against approved product facts and claim records. "Sounds plausible" is not enough to establish a claim as approved.

Topic	Policy	Decision
Sugar wording	"No added sugar" may be used where the current product record states added sugars = 0 g/100 mL. Do not say "sugar-free", "zero sugar" or "0% sugar" because naturally occurring sugars are present.	Approved wording only; false sugar-free wording = block.
Processing	Products are HPP or flash-pasteurised as specified by SKU. Do not call them "100% raw", "unprocessed" or "untreated farm juice".	Block unsupported processing claims.
Medical claims	No claim that a product treats, prevents, manages or cures a disease or infection.	Critical / block.
Detox, weight loss, immunity	No organ cleansing, toxin flushing, belly-fat burning, weight-loss outcome or immunity-boost claim.	Critical / block.
Nutrition	Only the seven metrics in Section 7 are specified. Vitamin, mineral, fibre or other benefits are not established by this sample.	Block unsupported nutrition claims; otherwise escalate unknowns.
Organic / natural / chemical-free	No organic, pesticide-free or chemical-free certification is supplied in this sample. "100% organic" is not permitted.	Block until substantiation and approval exist.
Superiority	No "India's healthiest", "No. 1", "best", "purest" or competitor comparison without specific approved substantiation.	Block unsupported comparative claim.
Testimonials / credentials	Do not invent customer reviews, doctor or nutritionist endorsements, laboratory certifications, awards, regulatory license numbers or partnerships.	Critical / block.
Sustainability	No "carbon-neutral", "zero-emissions" or "100% ocean-recycled glass" claims without an approved substantiation record.	Block unsupported claim.
Ingred./percentages	Use only SKU-specific composition as recorded in Section 7. Percentages must match exactly and sum to 100% in this synthetic catalogue.	Flag mismatch; block if the false claim is explicit.

6.1 Approved claim register

Claim ID	Exact approved wording	Scope / condition
WV-CLM-001	"Good ingredients. Clear choices."	Brand tagline; exact wording.
WV-CLM-002	"No added sugar."	All five listed SKUs, only while current approved facts say 0 g added sugars/100 mL. Do not substitute "sugar-free".
WV-CLM-003	"250 mL glass bottle."	All five current SKUs.
WV-CLM-004	"Made with 60% mango."	WV-PROD-001 only.
WV-CLM-005	"Contains celery (12%)."	Mandatory when WV-PROD-004 is promoted or depicted with ingredient details.
WV-CLM-006	"Made with [exact ingredients and percentages]."	Only when all names and percentages exactly match the current SKU record.

6.2 Claims requiring review

- "Supports digestion", "natural energy" and "low calorie" are not approved in this sample. Do not use them until a named reviewer approves exact wording and substantiation.
- Claims involving a missing product value must return: "Unable to verify against the supplied guidelines; needs user review."

06 / PRODUCT TRUTH

Approved product catalogue

These five SKU records are the authoritative synthetic facts for this sample. Use the exact SKU scope; do not copy one product's facts to another product.

SKU / product	Ingredients by weight	Process	Pack / MRP	Unopened shelf life
WV-PROD-001 **Mango Ginger Press**	Mango 60%; orange 30%; ginger 10%.	High-pressure processed (HPP)	250 mL glass ₹125	21 days from pack date; keep refrigerated at 2°C-5°C.
WV-PROD-002 **Ruby Beet Berry**	Beetroot 40%; apple 35%; strawberry 20%; lemon 5%.	High-pressure processed (HPP)	250 mL glass ₹120	21 days from pack date; keep refrigerated at 2°C-5°C.
WV-PROD-003 **Citrus Carrot Glow**	Orange 62%; carrot 30%; lemon 8%.	Flash-pasteurised	250 mL glass ₹115	60 days from pack date; store cool and dry away from sunlight.
WV-PROD-004 **Green Garden Blend**	Cucumber 30%; green apple 30%; spinach 20%; celery 12%; lime 8%.	High-pressure processed (HPP)	250 mL glass ₹110	21 days from pack date; keep refrigerated at 2°C-5°C.
WV-PROD-005 **Pineapple Mint Cooler**	Pineapple 80%; cucumber 14%; mint 4%; lime 2%.	Flash-pasteurised	250 mL glass ₹130	60 days from pack date; store cool and dry away from sunlight.

7.1 Universal product rules

- All five listed products use a single-serve 250 mL glass bottle. Do not state a different pack size, package material, SKU name or MRP.
- Composition percentages are specific to each SKU and sum to 100% for the listed formula. Do not transfer a percentage or ingredient from one SKU to another.
- The shelf-life values above are synthetic catalogue values. Only use them when the specific SKU and pack-date context are known; do not generalise them to all products.
- The catalogue does not provide batch-specific pack dates, current inventory or market-specific price overrides. These cannot be inferred from the PDF.

7.2 Product matching

Prefer a clear printed SKU or exact product name. If OCR is ambiguous, compare pack design and other visible identifiers. If two products remain plausible, do not select one silently; flag product identity for user review.

FACT CHECK RULE

If a poster states ₹119 for WV-PROD-001, the supplied MRP is ₹125. Report the discrepancy and cite this catalogue. If the poster does not identify a SKU or the applicable price is not present in the current approved source, report uncertainty rather than guessing.

07 / FACTUAL CLAIMS

Nutrition facts, allergens & storage

All numbers below are invented for this demonstration. They illustrate the structure needed for exact comparison and must never be reused as real product specifications.

8.1 Approved nutrition values per 100 mL

SKU	Energy kcal	Carbs g	Total sugars g	Added sugars g	Protein g	Total fat g	Sodium mg
WV-PROD-001	48	11.5	9.0	0	0.5	0.2	8
WV-PROD-002	42	10.0	7.5	0	0.7	0.2	24
WV-PROD-003	41	9.8	7.2	0	0.8	0.2	18
WV-PROD-004	28	6.4	4.1	0	0.9	0.2	22
WV-PROD-005	39	9.4	6.8	0	0.4	0.1	11

Only these seven metrics are established in this sample. Vitamin C, vitamin A, iron, magnesium, potassium, fibre, glycaemic effects and other nutrition/health outcomes have no approved values here.

8.2 Mandatory and conditional disclosures

Product / condition	Required wording or handling
WV-PROD-004 Green Garden Blend	When the product is promoted or ingredients are listed, include: **"Contains celery (12%)."** Do not omit or paraphrase the ingredient percentage in a way that changes meaning.
HPP products: WV-PROD-001, 002, 004	Use exact storage statement when storage instructions are required in the placement: **"Keep refrigerated at 2°C-5°C. Shake well before drinking. Consume within 24 hours of opening."**
Flash-pasteurised products: WV-PROD-003, 005	Use exact storage statement when required: **"Store in a cool, dry place away from direct sunlight. Refrigerate at 2°C-5°C after opening and consume within 48 hours."**
All products / allergen statements	Cross-contact evaluation is not supplied in this sample. Never claim "allergen-free" or "free from all allergens". Escalate specific allergen assurance requests for review.
Nutrition copy	Where a nutrition value is shown, use the correct SKU, metric, unit and per-100-mL basis. Do not present per-100-mL values as per-bottle values.

8.3 Example disclosure for demo creative

ILLUSTRATIVE DEMO DISCLOSURE - NOT A STATUTORY MANDATE

Nutritional values shown are based on Willow & Vale internal synthetic specifications per 100 mL. Fruit and vegetable juices contain naturally occurring sugars.

The sample manual does not determine statutory label requirements. Real organisations must supply current, reviewed product facts and seek qualified legal/regulatory review where required.

08 / PROMOTIONS

Discounts, urgency & expiry

Promotions are time- and scope-bound. A previously valid offer is not valid merely because it appears in an old creative or archived document.

9.1 Current synthetic promotion record

Field	Approved record
Promotion ID	WV-PROMO-001 - Autumn Blend Offer
Status on 27 Oct 2026	Active (synthetic demo only)
Offer	10% off WV-PROD-001 Mango Ginger Press and WV-PROD-005 Pineapple Mint Cooler only
Code	VALE10
Valid dates	15 Oct 2026 through 15 Nov 2026, inclusive
Permitted channels	Official website and the brand's verified Instagram account
Conditions	One redemption per account; cannot be combined with other offers. Show terms clearly.

9.2 Expired example (never reuse as a current offer)

Promotion ID	WV-PROMO-OLD-001
Description	Starter Trio - ₹300 for three bottles
Status	Expired on 30 Sep 2025; retained only as historical sample data.
Rule	Any new creative presenting this as a current offer must be blocked or escalated, depending on the source/status certainty.

9.3 Promotion rules

- No unrecorded percentage discounts, coupons, bundles, promo codes or free gifts.
- No fake scarcity or urgency such as "only 5 bottles left", "last chance" or a countdown unless a current approved record substantiates it.
- Do not infer that a promo is active from its presence in the PDF. Determine status from start/end dates, timezone and current approved record.
- If the poster omits a code, date, terms or scope required by the campaign record, flag the omission.
- If date/time or market applicability is ambiguous, return the issue for human review rather than assuming the offer is valid.

DATE-DEPENDENT SAMPLE

This example offer becomes expired after 15 Nov 2026. The organization must update or remove the promotion record before using this manual for a later evaluation. All offer details are fictional.

09 / VISUAL ASSETS

Asset approval & object-use policy

An upload does not equal approval. Exact asset verification requires the underlying approved image files to be supplied separately.

Asset ID	Reference name	Status	Permitted use / action
WV-ASSET-001	Primary forest wordmark (SVG)	Approved	Digital and print on approved light surfaces. Actual SVG must be separately uploaded.
WV-ASSET-002	Reverse cream wordmark (PNG)	Approved	Dark forest or approved dark surfaces. Actual PNG must be separately uploaded.
WV-ASSET-003	Dark monochrome wordmark (SVG)	Approved	Monochrome print and approved single-colour uses.
WV-ASSET-004	Product pack images for WV-PROD-001 through 005	Approved	Use only for the matching SKU and approved channels. Each reference image must be separately uploaded.
WV-ASSET-005	Morning Glow campaign banner	Pending review	Do not publish until a reviewer approves it.
WV-ASSET-006	Detox Weekend Promo creative	Rejected	Contains prohibited detox claim and unapproved discount; block when identified with sufficient confidence.

9.1 How to evaluate visuals

- Compare a detected logo or product image against the actual uploaded reference asset, not only against its description in this PDF.
- Allow for scaling, compression, cropping and approved colour variants. If the match is uncertain, request human review.
- A blender, fruit, leafy background, person or kitchen scene is not prohibited by default. Check the applicable visual/content rule before raising a violation.
- A doctor, white coat, clinic, hospital symbol or clinical setting used to imply endorsement or medical benefit is prohibited unless explicitly and validly approved - which this sample does not establish.
- Do not claim that a pending or rejected reference asset is used unless visual matching confidence is sufficient. Explain the suspected match and route uncertain cases to a reviewer.

9.2 Logo geometry

- Maintain 25% of logo-symbol height as clear space on each side.
- Do not stretch, skew, rotate, crop, recolour, redraw or cover the logo.
- If exact clear-space measurement is unreliable because of perspective, background, image crops or low resolution, return an uncertain measurement rather than a definitive violation.

REFERENCE-ASSET GAP

The asset names and statuses above are synthetic text metadata only. This PDF does not embed the approved source files for matching. Organisations must upload the actual logo and reference assets for image-based verification.

10 / GOVERNANCE REGISTRY

Rule register - identity, content & claims

This is the canonical synthetic rule list. Each rule includes an explicit category, severity, action and default status so the governance engine has less room to infer policy.

ID	Rule / category	Severity	Action	Status & scope
WV-R001	Correct company and brand naming brand_identity / requirement	Medium	flag_for_review	Approved. External content; use official names.
WV-R002	Use approved brand palette visual_identity / requirement	Medium	flag_for_review	Approved. Flag deliberate off-palette fields only when an explicit rule applies; photos can contain other colours.
WV-R003	Correct logo variant, proportions and clear space asset_use / requirement	High	block	Approved. 25% clear space; logo must not be distorted. Visual uncertainty goes to review.
WV-R004	Typography and hierarchy visual_identity / requirement	Medium	flag_for_review	Approved. Check legibility and font rules; do not infer font family from a low-resolution image.
WV-R005	Text contrast and legibility accessibility / requirement	High	flag_for_review	Approved. Internal target: 4.5:1 ordinary text, 3:1 large text. Inconclusive sampling goes to review.
WV-R006	Clear, concise brand voice tone_of_voice / requirement	Low	warn	Approved. Plain language; target 12-20 words per sentence.
WV-R007	No fear, guilt or body-shaming tone_of_voice / prohibition	High	block	Approved. Interpret in context; do not keyword-block educational discussion.
WV-R008	No miracle, magic, elixir or cure-all product framing terminology / restriction	High	block	Approved. Educational disclaimer exception applies when the product is not being attributed the effect.
WV-R009	No disease-treatment, prevention or cure claim messaging_claims / prohibition	Critical	block	Approved. Includes diabetes, hypertension, heart disease, cancer and viral infections.
WV-R010	No detox, cleansing, weight-loss or immunity claim messaging_claims / prohibition	Critical	block	Approved. Includes flush toxins, cleanse liver/blood and burn belly fat.
WV-R011	No unsubstantiated nutritional metric or benefit nutrition / prohibition	High	block	Approved. Only seven metrics in Section 8 are supplied.
WV-R012	No sugar-free or zero-sugar description terminology / prohibition	Critical	block	Approved. Products contain naturally occurring sugars; "no added sugar" is conditionally approved.

Implementation note: severity and action are separate fields. For example, a high-severity issue may require a human flag instead of an automatic block when source evidence is uncertain.

10 / GOVERNANCE REGISTRY

Rule register - products, assets & escalation

The following rules complete the registry. If a rule needs information not supplied by the organization, the system must identify the check as unavailable or uncertain.

ID	Rule / category	Severity	Action	Status & scope
WV-R013	No unsupported organic, natural or chemical-free certification claim claims / prohibition	High	block	Approved. No certification record supplied in this sample.
WV-R014	No unsupported superiority, testimonial, award or endorsement claims / prohibition	Critical	block	Approved. No substantiation records supplied.
WV-R015	Exact product name, ingredients, size and MRP product_facts / requirement	High	flag_for_review	Approved. Compare against exact SKU record; block explicit false claims after verification.
WV-R016	No unapproved discount, code or fabricated scarcity promotion / prohibition	High	block	Approved. Offer must have active dates, scope and terms.
WV-R017	Required celery disclosure for WV-PROD-004 disclosure / requirement	Critical	flag_for_review	Approved. Must state "Contains celery (12%)" when product/ingredients are promoted.
WV-R018	Correct SKU-specific storage wording product_safety / requirement	High	flag_for_review	Approved. HPP and flash-pasteurised products use different wording.
WV-R019	Only approved assets and permitted channels asset_use / requirement	High	block	Approved. Exact match requires actual reference files; uncertainty must be flagged.
WV-R020	Escalate pending, expired or missing substantiation governance / escalation	Critical	escalate_to_human	Approved. No automatic approval for unresolved evidence.
WV-R021	Brand name remains English alongside transliteration terminology / requirement	Low	flag_for_review	Approved. Local script may supplement but not replace the official brand name.
WV-R022	Expired promotion must not be presented as active promotion / restriction	Medium	block	Approved. Evaluate dates in the applicable timezone.
WV-R023	Readable text, safe margins and accessible contrast accessibility / requirement	Medium	flag_for_review	Approved. Missing pixels or low resolution makes the check inconclusive.
WV-R024	Conflicting sources or missing fact cannot be silently resolved evidence / escalation	Critical	escalate_to_human	Approved. Return the conflicting passages and ask for a decision.
WV-R025	No visual implication of medical endorsement or treatment visual_messaging / prohibition	Critical	block	Approved. Apply when a visual implies medical endorsement or treatment; ordinary objects are not violations.

11 / WORKFLOW

Severity, action & review semantics

These definitions are needed so extracted rules use consistent, explainable workflow states.

Action	Meaning	Expected system behaviour
block	A confirmed violation must prevent the item from being marked ready to publish.	Explain the rule and correction; re-evaluate after editing. Do not let an uncertain match masquerade as a confirmed block.
warn	A low-impact issue or guideline recommendation.	Show the warning and rationale; the creator may proceed if workflow policy allows. Log the decision when required.
flag_for_review	A human decision is required before the relevant content is approved.	Route to authorised reviewer; include evidence, uncertainty and the proposed correction.
escalate_to_human	The policy is missing, contradictory, pending or cannot be safely interpreted.	Pause the affected decision and route the source conflict or missing information to the correct owner.

11.1 Severity scale

Severity	Definition	Example
Critical	Potentially serious unsupported medical, safety, fabricated credential or material claim.	Disease treatment claim; unsubstantiated doctor endorsement.
High	Material factual, product, asset or policy violation.	Wrong MRP, disallowed promotion, distorted logo.
Medium	Material consistency or publication-quality issue that normally needs review.	Off-palette field where policy applies; naming inconsistency.
Low	Style or clarity improvement.	Dense sentence or small tone mismatch.

11.2 Knowledge status meanings

Status	Meaning / use
approved	Reviewed and currently usable within recorded scope and dates.
pending_review	Candidate only. Do not treat as approved policy or approved claim.
rejected	Reviewed and rejected. Do not use as approved content or policy; may remain as a negative reference.
expired	Previously valid but no longer current. Keep for history and stale-rule detection.
superseded	Replaced by a newer approved record. Retain traceability and avoid applying it as current policy.
unverified	Evidence or provenance has not been established. Do not make a definitive decision from it alone.

11.3 Human review and correction

- Reviewers can correct a candidate, but the original extraction and evidence must remain available for audit.
- An approval must record reviewer, timestamp, scope, evidence and any conditions. A reviewer correction does not overwrite the source document.
- If an author challenges a finding, preserve the original check and record the resolution rather than deleting the audit trail.

12 / EVIDENCE STANDARD

How Inkloom AI should handle evidence

The system should produce a result that a reviewer can verify without trusting an unexplained model conclusion.

Field	Requirement
Source identity	Source document ID, filename, version and review status. A similar-looking document is not automatically the same source.
Page / location	Page number when available; for an image, a region or bounding box where technically supported. Do not invent a page number.
Evidence passage	Short verbatim text from the source supporting the rule or value. Preserve punctuation and units where material.
Extracted interpretation	The normalized rule/fact, with distinction between explicit wording and model interpretation.
Validation status	Exact match, normalized/fuzzy match, page mismatch, unsupported, unverified or conflict - according to the validated implementation.
Uncertainty	Why the system is uncertain and which missing input or human decision would resolve it.
Versioning	Record the guideline/knowledge version used for each evaluation so a later rule change does not rewrite history.

12.1 Required wording when information is missing

STANDARD UNVERIFIED RESULT

Unable to verify against the supplied guidelines; needs user review.

Use this result when a poster states a price, nutrition value, certification, product property, promotion or other factual claim that the supplied approved sources do not establish. It is not the same as a confirmed violation, and it must not be reported as compliant.

12.2 Conflicting source rules

- Show both conflicting excerpts, their pages, source IDs and each extracted interpretation.
- Do not silently prefer a table, summary paragraph, newest file or model-generated interpretation unless the organization has explicitly defined that source hierarchy.
- Route the conflict to an authorised reviewer and preserve the resolution as an auditable decision.

12.3 When to use deterministic checks, retrieval or AI

Method	Best for	Limit
Deterministic checks	Exact prices, units, dates, product IDs, colour hex values, required phrases, rule status.	Only as accurate as the sourced rule/data and extraction.
Keyword / lexical search	Exact restricted terms, SKU identifiers, phrases and page headings.	Must handle context, punctuation, spelling and OCR errors.
Vector / hybrid retrieval	Finding relevant passages, explanations, exceptions and similar policy text.	Similarity is not policy approval; verify against source and status.
Vision / OCR models	Text in images, logo/object matching, approximate layout and visual semantics.	Can miss or misclassify; low-quality images need uncertainty handling.
Language-model reasoning	Tone, context, paraphrase, ambiguous claims and suggested corrections.	May hallucinate; every material finding needs source evidence.

13 / ORGANIZATION UPLOAD GUIDE

What a real organization should provide

This page is a checklist for organizations preparing their own guideline PDF. They do not have to copy the sample brand or invent information they do not have.

Required minimum uploads

- **1. Brand guidelines PDF:** official brand/company naming; visual identity; tone of voice; terminology and messaging rules; claim restrictions; asset-use rules; accessibility guidance; disclosures; exceptions; review/approval requirements; and product facts only where the organization has approved them.
- **2. Official logo:** SVG or transparent PNG preferred. Provide light/dark/monochrome variants if used.

Optional supporting material

- **Approved visual assets:** product photos, approved campaign creatives, iconography, packaging and any rejected/pending reference that the system must recognise. Upload the actual files; a text description alone is not enough for image matching.
- **Product/claim register:** optional CSV/XLSX or form only when exact product facts, prices, nutrition values, approved claims or promotions need verification. A full nutrition table is not required unless those checks are in scope.

Recommended sections in the organization PDF

Section	What to include	Why it matters
Brand identity	Names, tagline, market, product/category, audience and positioning.	Validate naming and claim context.
Visual system	Logo variants, palette, fonts, clear space, layout and imagery rules.	Check colour, typography, logo and visual consistency.
Voice and content	Tone, restricted terms, examples of approved and prohibited copy, exceptions.	Check language and contextual claims.
Product truth (if relevant)	SKU, exact name, ingredients/percentages, pack size, price, approved nutrition values and units.	Verify exact product statements only where supplied.
Claims and promotions	Approved/prohibited claims, substantiation, dates, conditions, channels and expiry.	Avoid unsupported claims and stale offers.
Disclosures and accessibility	Required wording, product triggers, storage/allergen facts, contrast/readability rules.	Check required content and usability.
Governance	Rule severity, action, status, exceptions, owner/reviewer and source evidence.	Support reliable review and audit.

Before upload

- Use a current, approved version and include an effective date/version number.
- State exceptions and conditions explicitly. Do not rely on implied knowledge.
- Do not include confidential information that the organization is not authorised to share.
- If an item is unknown or not formally approved, label it as unknown/pending rather than presenting it as an approved fact.

THE PROMISE OF THE SYSTEM

Inkloom AI checks content against the supplied, approved knowledge. It must identify what it verified, cite the basis for each material finding, and say **"Unable to verify against the supplied guidelines; needs user review"** when the required evidence is missing.

Sample document ends here. All names, values, products, claims, asset statuses and policies are fictional demonstration data. Real organizations must upload their own approved logo and replace all sample specifications with authoritative records.
